

Logbooks and Preflight Checklist

Create a flight, maintenance logbook, and preflight checklist, this may be done as a hard copy or electronic version. Microsoft Excel is a common choice but feel free to branch out and use another program.

I encourage you to browse the web for different ideas and templates. Research the elements common in each logbook and include additional fields you feel necessary.

At the minimum, the logbook must contain six columns with headers, including a column for flight time, and place for the pilot's signature of acknowledgment.

Assignment Summary:

- 1) Flight Logbook
- 2) Maintenance Logbook
- 3) Preflight Checklist

I know this appears to be quite a bit of work, but it should not be too bad once you find a template to follow. This will give a head start for when you achieve your sUAS pilot's certification. At that time, you may research apps through google or android to see if those provide better options.
